EDUCATION

Ph.D. Student in Computer Science — Aug. 2021 - Present
George Mason University — Fairfax, VA, USA
Advisor: Dr. Bo Han

WORKING EXPERIENCE

George Mason University, USA
Research Assistant — Aug. 2021 - Present

- Design semantic-aware live interactive holographic communication system.
- Design gaze-driven volumetric video streaming system.
- Design privacy-preserving biometric-based user authentication system in virtual reality (VR).
- Conduct network measurement study on social VR platforms.

SELECTED PROJECTS

Semantic-aware, Interactive, and Live Holographic Communication

- Build an end-to-end live volumetric content capture, creation, delivery, and rendering system set up at multiple locations.
- Deliver semantic information extracted from telepresence participants to drastically reduce Internet bandwidth usage while preserving high FPS and satisfactory visual quality.

Gaze-driven and Perception-aware Volumetric Content Delivery

- Build a gaze-driven and perception-aware volumetric content delivery system on HoloLens 2.
- Reduce bandwidth consumption by up to 67.0% and enhance visual quality by up to 92.5%.

Privacy-preserving Biometric-based User Authentication in VR

- Utilize federated learning (FL), a privacy-preserving distributed machine learning technique, to conduct user authentication while protecting user privacy in social VR.
- Design a personalized within-client and between-client modality selection algorithm.
- Develop a personalized strategy for initializing FL models.
- Improve authentication accuracy by up to 27% compared to the state-of-the-art FL-based model.

Network Measurement in Social VR

- Conduct an in-depth measurement study on several social VR platforms.
- Identify all measured platforms facing scalability issues in terms of throughput, end-to-end latency, and on-device computation resource utilization.

Honors and Awards

Best Paper Award, Metabuild@IEEE VR	2022
Student Travel Grant, IEEE VR	2022
Mason Engineers Week Poster Winner, George Mason University	2022
